

Passwords are a critical part of any authentication process. Kentico provides various passwordrelated features that you can leverage to achieve the level of security required by your website.

These settings can be found in **Settings -> Security & Membership -> Passwords**.

The features include:

- A set of secure format options for storing user passwords
- Resetting and recovery of user passwords
- Password strength and other policies to enforce specific requirements
- Expiration time that requires users to periodically change passwords
- Locking of user accounts when an incorrect password is entered too many times
