

Page type permissions control the access to all pages of a particular page type. These permissions are assigned to roles in the **Permissions** application.

To modify the permissions for a particular page type:

1. Choose *Page type* from the first **Permissions for** drop-down list.
2. Choose the required page type from the second drop-down list.

You can grant the following page type permissions to particular roles:

Read	Allows members of the role to view any page of this type.
Modify	Allows members of the role to edit any page of this type.
Create	Allows members of the role to create pages of this type. With this permission, users must also have the Create page-level permission on the parent page under which they want the new page to be created.
Create anywhere	Allows members of the role to create pages of this type anywhere in the content tree, without the need to have the Create page-level permission on the parent page under which they want the new page to be created.
Delete	Allows members of the role to delete any page of this type.
Destroy	Allows members of the role to destroy (delete without the <i>Undo</i> option) any page of this type.
Browse tree	Allows members of the role to see pages found under pages of this type in the content tree.
Modify permissions	Allows members of the role to manage page-level permissions of all page of this type in Pages -> Properties -> Security .
