

Database tables

Database table	Description
CMS_WebPartCategory	Stores records representing web part categories.
CMS_WebPart	Stores records representing web parts, their configuration, and properties.
CMS_WebPartLayout	Stores custom layouts for web parts.
CMS_WebPartContainer	Stores records representing web part containers .
CMS_WebPartContainerSite	Stores relationships between web part containers and sites. Each entry indicates that a specific container can be used on a given site.

Web part instance storage

Web part zones, web part instances, and their configuration are part of the content of [page templates](#). The system stores the data in XML format inside the **PageTemplateWebParts** column of the **CMS_PageTemplate** table.
