

You can allow users to rate a page by inserting the **Content** rating widget on the page.

1. With your mouse, click where in a text area you want to place the widget.
2. On the editor toolbar, click on the **Insert rating** button. A **Widget properties (Content rating)** dialog appears.

3. Specify the widget properties.

A screenshot of the 'Widget properties (Content rating)' dialog. It has two main sections: 'Scale settings' and 'Widget container'.
In 'Scale settings':
- 'Rating type:*' is a dropdown menu set to 'Stars'.
- 'Max rating value:*' is a text input field containing '5'.
In 'Widget container':
- 'Widget container:' is a dropdown menu set to 'Corporate site - Light gradient box', with 'Edit' and 'New' buttons to its right.
- 'Container title:' is a text input field containing 'Rate this post!'.

4. **Save & Close.** The system places the content rating widget on the page.
5. **Save** the page.

Users can now rate the page that you placed the content rating widget on.
