

You can edit files inserted into the content tree. If you edit an image, the system opens its [built-in image editor](#) that allows you to perform operations like resizing, rotating and others. For other file types, you can [edit metadata](#), i.e. information about the attached file, such as **Title** and **Description**, only.

To edit content tree files

1. Open the **Pages** application.
2. Click on the file that you want to edit.
3. Switch to the **Form tab**.
4. Here, you can edit the **File name** and the **Description** of the file.
5. If you want to edit additional metadata of the file or, if you want to edit an image, click on **Edit** (🔧). If you edited an image file, an [Edit image](#) dialog opens. Otherwise, an [Edit metadata](#) dialog opens.
6. Edit the file and **Save** the changes that you make.

The system saves the modified file.
