

Examples in the *E-commerce features* section of the documentation are based on the sample *Dancing Goat* and *E-commerce Site*. In order to try out the examples in practice, we recommend that you install the *Dancing Goat* and *E-commerce Site* first.

You can install the e-commerce sample sites in both cases:

- [You are going to run a new installation of the system.](#)
- [You have already installed the system \(but without one or both e-commerce sample sites\).](#)

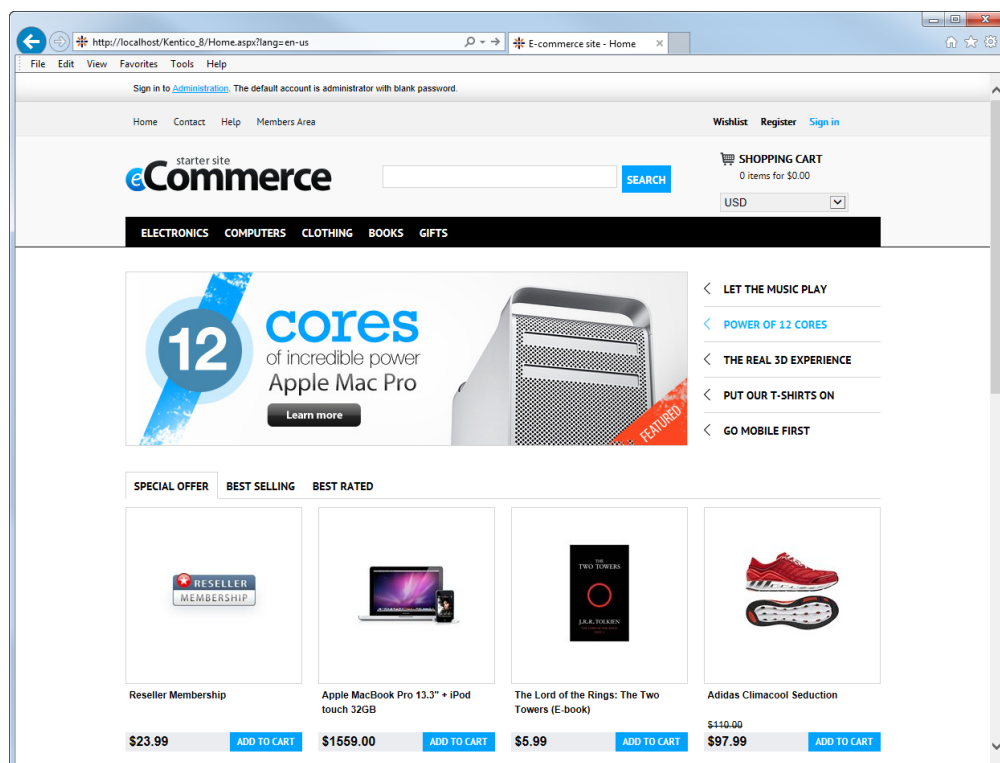

## New Kentico installation

1. Launch *Kentico\_<version>.exe* and follow the instructions in [Installing Kentico - custom installation](#) (you can also use [quick installation](#) if preferred).

 It is highly recommended that you install all e-commerce and on-line marketing components when going through the custom installation. Otherwise, the sample sites may not work correctly.

2. In the **Sample sites** step, select *Dancing Goat* and *E-commerce Site*.
3. Click **Next** and continue with the installation.

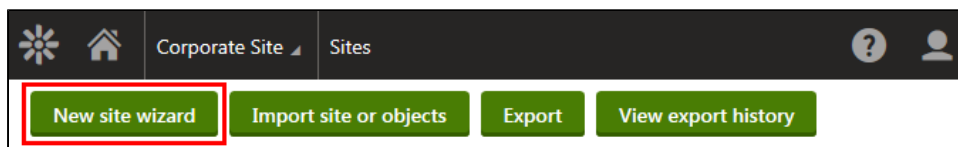

After the system successfully finishes the installation, you can [launch](#) the sample *Dancing Goat* or *E-commerce Site*.

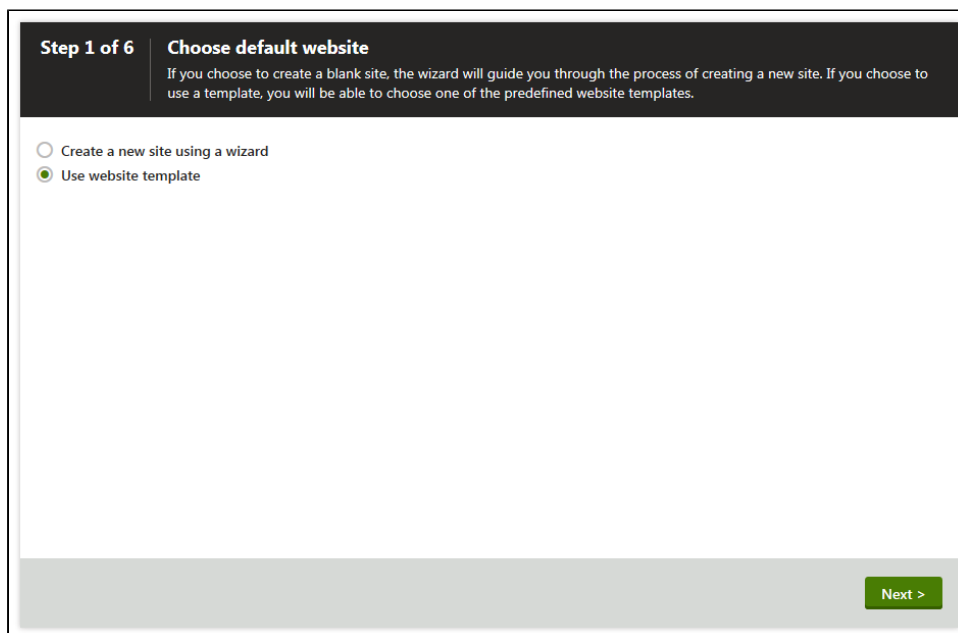

## Existing Kentico installation

If you have already installed Kentico but without one or both of the e-commerce sample sites (*Dancing Goat* and *E-commerce Site*), you can add the site using the [New site wizard](#).

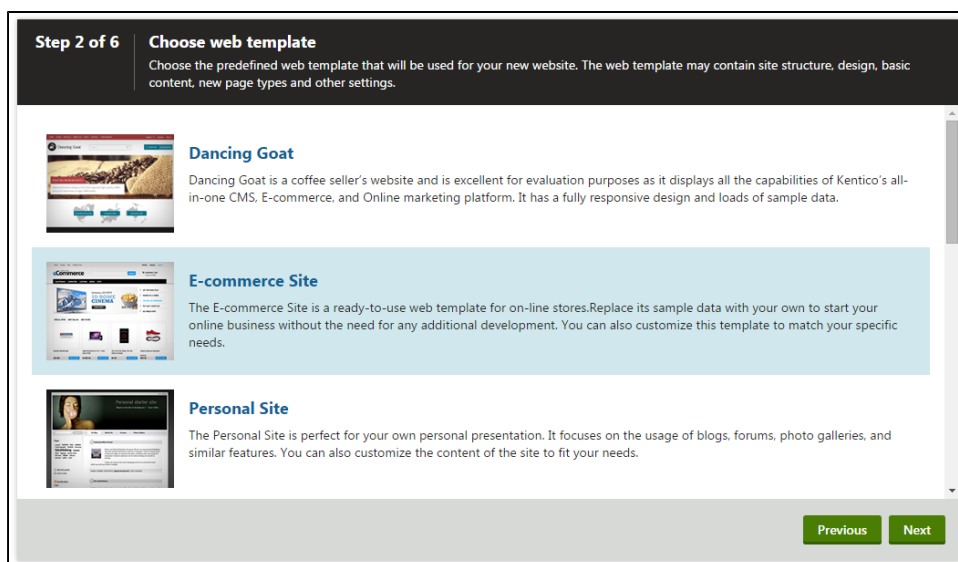

1. Open the **Sites** application and click **New site wizard**.

2. In **Step 1** of the wizard, select **Use website template** and click **Next**.

3. In **Step 2**, select *Dancing Goat* or *E-commerce Site* from the list of available website templates and click **Next**.

4. Go through the rest of the wizard as described in [Creating new sites from templates](#).

 We recommend that you leave the default settings unless you really need to change them according to your specific requirements.

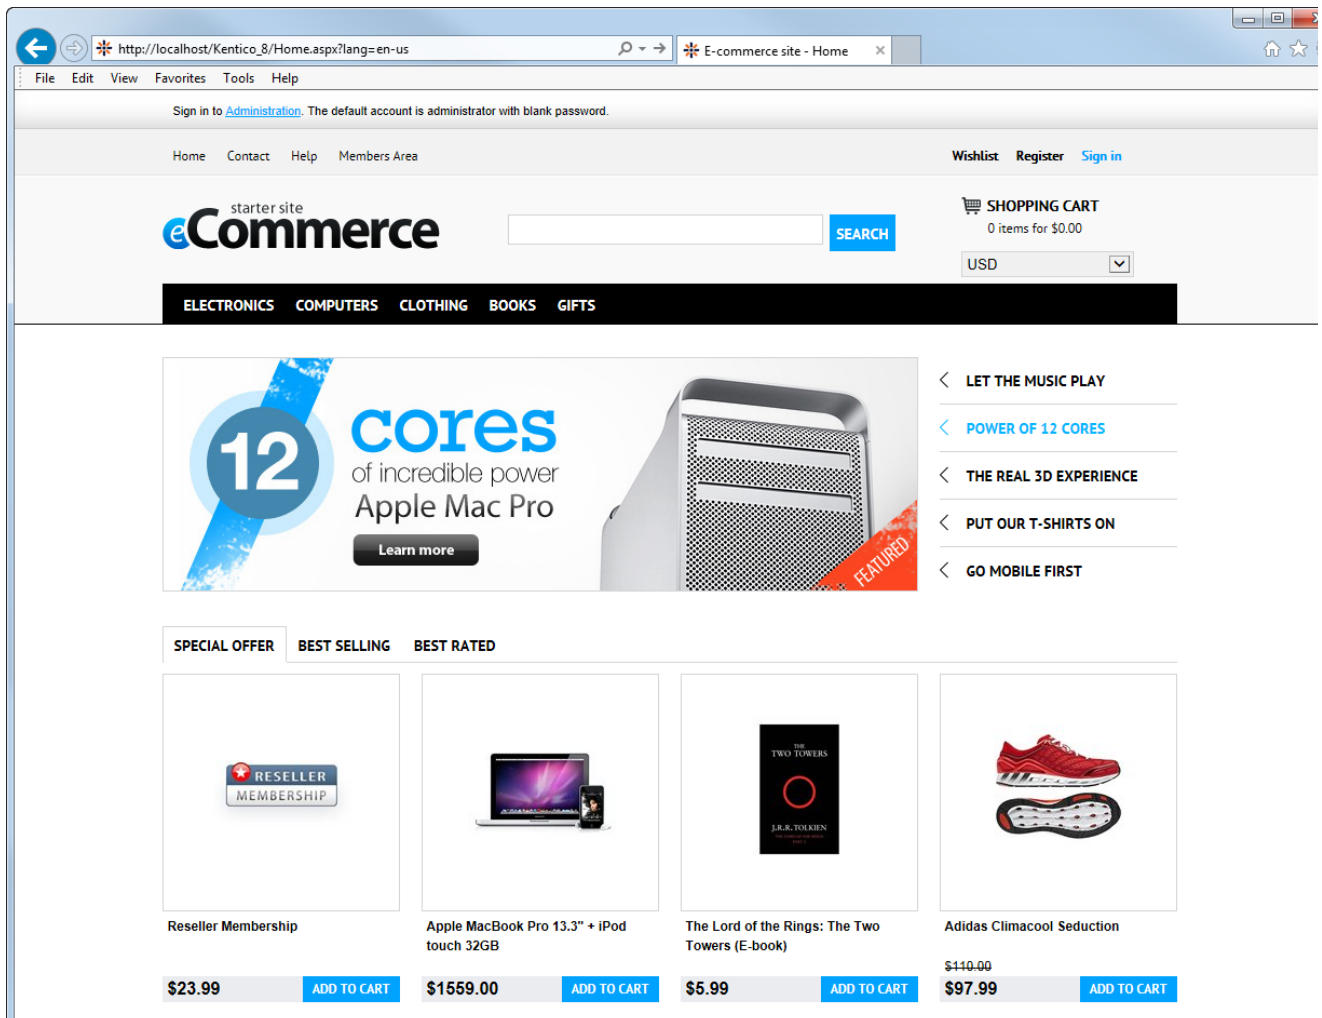

When the wizard finishes, you can see in the **Sites** application that the e-commerce sample sites are listed among other available sites.

Corporate Site Sites

Actions	Site name	Status	Main domain	Documents	Default culture	
    	Corporate Site	Running	localhost	572	English - United States	
    	E-commerce Site	Stopped	localhost	197	English - United States	
    	Personal site	Stopped	localhost	46	English - United States	

Items per page 25

- Run () the *Dancing Goat* or *E-commerce Site*.
- Go to **Applications** and click **Live site**.

The system opens the home page of the launched site.

The screenshot shows the home page of the E-commerce site. The browser address bar displays `http://localhost/Kentico_8/Home.aspx?lang=en-us`. The page features a navigation bar with links for Home, Contact, Help, and Members Area. A search bar is prominently displayed. Below the navigation bar, there is a large banner for "12 cores of incredible power Apple Mac Pro". To the right of the banner, a sidebar lists featured items: "LET THE MUSIC PLAY", "POWER OF 12 CORES", "THE REAL 3D EXPERIENCE", "PUT OUR T-SHIRTS ON", and "GO MOBILE FIRST". The main content area is divided into four product categories: "SPECIAL OFFER" (Reseller Membership), "BEST SELLING" (Apple MacBook Pro 13.3" + iPod touch 32GB), "BEST RATED" (The Lord of the Rings: The Two Towers (E-book)), and "Adidas Climacool Seduction". Each product category includes an image, a price, and an "ADD TO CART" button.
