

Although we recommend that you manage products the standard way as described in [Products](#) (i.e. manage product objects or SKUs together with associated [product type](#) pages), the current version of the Kentico E-commerce Solution allows you to manage product objects with unassigned product type pages (stand-alone SKUs).

 As stand-alone SKUs are disabled by default, you need to modify your on-line store [settings](#) to be able to access product objects with unassigned product type pages.

Managing stand-alone SKUs

You can manage stand-alone SKUs in the **Products** application. If they are allowed on the current site, the system displays the **Stand-alone SKUs** node above the [product sections tree](#). The node allows you to view a list of all product objects with unassigned product type pages defined on the current site.

You can add a new stand-alone SKU by clicking **New** (+) above the tree (if the **Stand-alone SKUs** node is selected). Properties of already defined stand-alone SKUs can be modified in a dedicated stand-alone SKUs user interface by clicking **Edit** (✎) in the **Actions** column. You can also remove a stand-alone SKU from the system by clicking **Delete** (🗑).

Actions	Product name	SKU	Price	Stock	Status	For sale

Editing stand-alone SKUs

If you are editing an SKU, the system offers the following tabs to specify its properties:

- [General tab](#)
- [Options tab](#)
- [Volume discount tab](#)
- [Pages tab](#)

 The **Pages** tab is available only for [global](#) stand-alone SKUs. If a global SKU is not assigned to a page on a particular site, the Pages tab is empty.

 The same tabs containing the same properties are available if you are editing a product (i.e. SKU + associated product type page).
