

Workflows can be defined separately for each language version of your pages by using culture-dependent workflow scopes. A workflow scope determines which pages are affected by a particular workflow.

To learn how to create workflows and workflow scopes, refer to the [Configuring workflows](#) chapter.

The system applies workflow scopes with the following priority (from highest to lowest):

1. Scopes with a specified page type and culture
2. Scopes with a specified page type
3. Scopes with a specified culture
4. Scopes without a specified page type and culture

The screenshot shows the 'Workflow Scope' configuration window in Kentico. On the left is a sidebar with navigation links: General, Steps, Scope, E-mails, Pages, and Versions. The main area is divided into two sections: 'General' and 'Advanced'.

General Section:

- A 'Save' button is at the top left.
- The title 'General' is centered.
- A text field 'This scope covers:' contains '/News', followed by a 'Select' button.
- Three radio buttons are listed:
 - ☐ Specified page and its children
 - ☐ Only specified page
 - ☒ Only child pages
- A 'Type:' label is followed by two radio buttons:
 - ☒ Apply workflow on pages in this scope
 - ☐ Exclude workflow from pages in this scope

Advanced Section:

- A 'Page type:' dropdown menu is set to 'News (CMS.News)'.
- A 'Culture:' dropdown menu is set to 'English - United States'.
- A 'Condition:' text field is empty.
- 'Edit' and 'Clear' buttons are at the bottom right.
