

While adding a new product or section in the **Products** application, you can **Link an existing product or section**. This approach allows you to create a shortcut to an already existing product or product section. You can thus place a single product (product section, both empty and non-empty) to multiple locations in the product sections tree instead of creating its copies.

If a product (product section) is linked, the system displays it in the corresponding part of the website. If you then edit the product (product section), you modify the original product (product section) content.

To link a product or a product section:

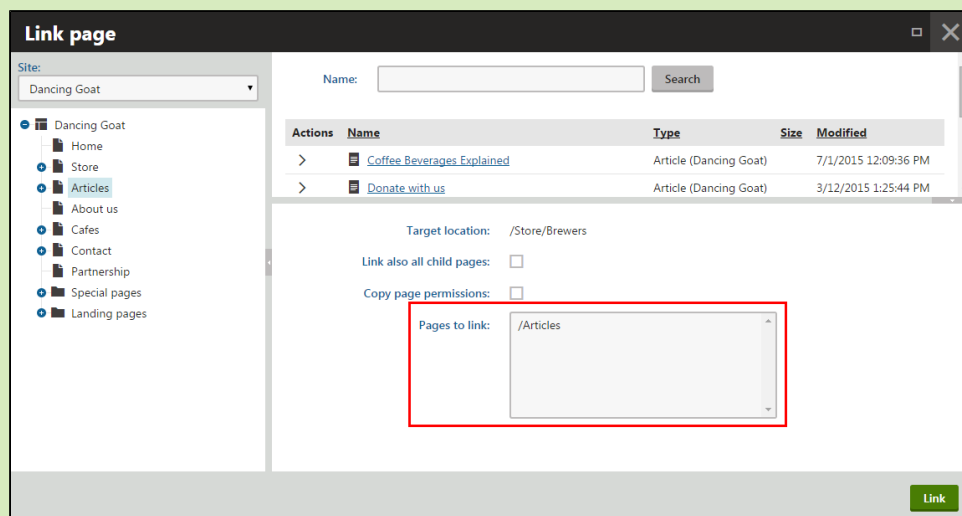

1. Open the **Products** application.
2. Navigate to the desired parent page of the linked product (or section).
 - For example, if you want to place the *TV* section, which is originally in the *Electronics* section, to the *Living room* section, open the *Living room* page.
3. Click **New (+)**.
4. Click **Link an existing page**.

 If you set **page scope** and you do not allow linking existing products or sections, this option is not available.

5. In the **Link page** dialog:
 - a. Type the **name** of the linked page.
 - In other words, the linked page can have a different name from its original
 - b. With the page tree selector on the left and the page list above, select the linked product (or section).

 You can see what is selected in the **Pages to link** field.

- c. (Optional) If you selected a section, you can also display the original section's product sub-tree in the linked location by selecting the **Link also all child pages** field.

- d. (Optional) You can copy page permissions (i.e., who can manage these products) by selecting the **Copy page permissions** field.
- e. Click **Link**.

If an error occurs ("*The page 'X' of type 'Y' is not allowed in target location.*"), you need to add the type *Y* to the scope of the section. Learn more in [Configuring product structure](#).

The product (or section) is now linked and available from the original and the linked location on the live site.
