

The example demonstrates how you can add a product with [Products](#) options to a Kentico site. The product is based on the *Product - Watch* product type, has three product options, and only two of these options are enabled.

The example uses the sample E-commerce Site.

Adding a new product

First, you need to add a new product of the required [type](#) and [representation](#) to a selected part of your on-line store.

1. Open the **Products** application.
2. Select **Gifts -> Watches** in the product sections tree and click **New (+)**.
 - The system opens a dialog allowing you to specify the required type of your new product.
3. Select **Product - Watch** in the **Product types** column.

- The system opens a page where you can specify product properties.
 - Alternatively, you can select some other product type, e.g. **Product**.
 - If the system doesn't offer any product type (for example, if you deleted the default product types), create a new product type as described in [Configuring product page types](#).
4. Enter the following values for the product's properties:
 - **Product name:** Kentico Watch
 - **Price:** 359.99
 - **Department:** Gifts
 - **Image:** upload an image file
 - **Representing:** Standard product
 - **Allow for sale:** Yes (selected)
 - **Available items:** 10
 5. Click **Save**.

The system adds the product to the selected part of your on-line store. Now you can add to the product a product option category.

Adding a product option category to the product

1. Switch to the product's **Options -> Option categories** tab and click **New category**.

- Alternatively, you can add to the product an existing category by clicking **Add categories**.
2. Enter the following values for the category's properties in the **General** section:

- **Option category name:** Watch cases

The system uses this name in your on-line store administration interface.

- **Display name:** Case

The system uses this name on the live site.

- **Enabled:** Yes (selected)
 - **Type:** Products
3. Click **Save**.
 4. Enter the following values for the category's properties in the **Options** section:
 - **User control type:** Check boxes in vertical layout
 - **Display price adjustment:** Yes (selected)
 5. Click **Save**.

The system adds to the product an empty product option category. You can now add product options to the category.

Adding product options to the category

Add three product options to the *Watch cases* category, representing a leather, aluminium and glass watch case.

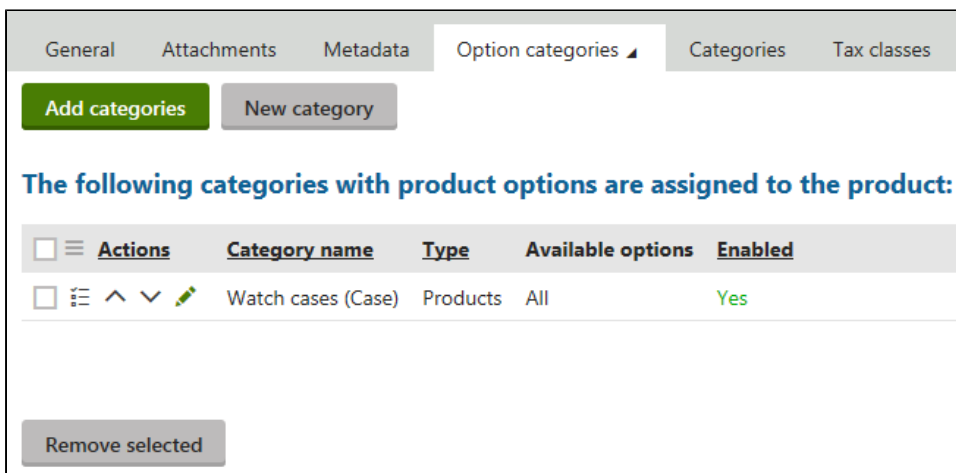

1. Switch to the **Options** tab.
2. Click **New product**.
3. Enter the following values for the first option's properties:
 - **Product name:** Leather
 - **Price:** 24.99
 - **Representing:** Standard product
 - **Allow for sale:** Yes (selected)
4. Click **Save and create another**.
5. Enter the following values for the second option's properties:
 - **Product name:** Aluminium
 - **Price:** 9.99
 - **Representing:** Standard product
 - **Allow for sale:** Yes (selected)
6. Click **Save and create another**.
7. Enter the following values for the third option's properties:
 - **Product name:** Glass
 - **Price:** 19.99
 - **Representing:** Standard product
 - **Allow for sale:** Yes (selected)
8. Click **Save** and close the dialog.

The system adds to the option category three product options. Now you can specify which of these options the system is to offer to your customers while purchasing the product.

Selecting available options

Currently, all the three options are available for the product. However, you want your customers to be able to buy the Kentico Watch with a leather and glass watch case only. This means that you need to disallow the *Aluminium* option.

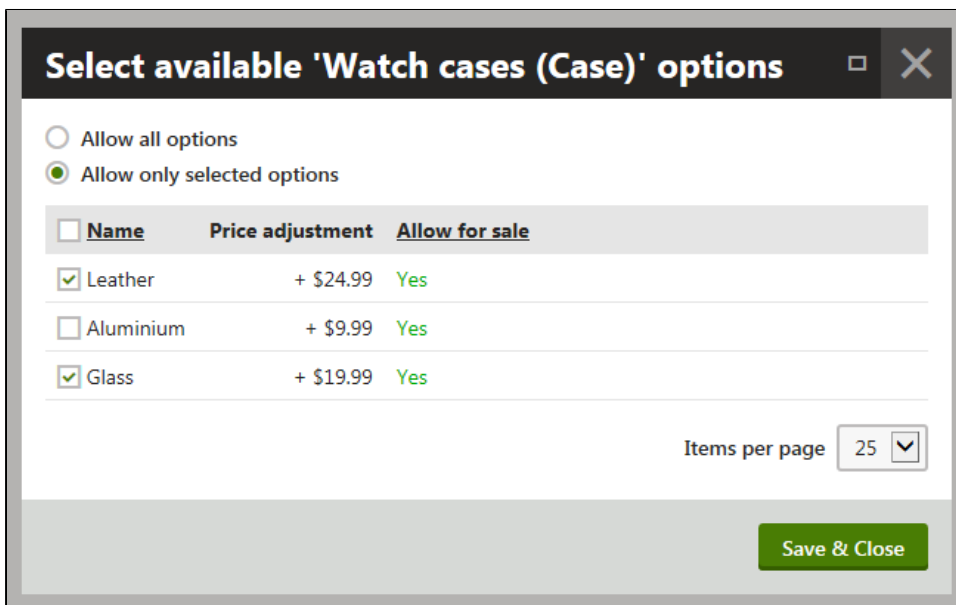

1. Click **Select available options** (≡).

The screenshot shows the 'Option categories' tab in the Kentico product configuration interface. It includes tabs for 'General', 'Attachments', 'Metadata', 'Option categories', 'Categories', and 'Tax classes'. Below the tabs are buttons for 'Add categories' and 'New category'. A message states: 'The following categories with product options are assigned to the product:'. Below this is a table with columns: 'Actions', 'Category name', 'Type', 'Available options', and 'Enabled'. The table contains one row for 'Watch cases (Case)' with 'Products' as the type, 'All' as available options, and 'Yes' as enabled. At the bottom is a 'Remove selected' button.

Actions	Category name	Type	Available options	Enabled
<input type="checkbox"/> ≡ <input type="checkbox"/> ≡ <input type="checkbox"/> ≡ <input type="checkbox"/> ≡ <input type="checkbox"/> ≡	Watch cases (Case)	Products	All	Yes

- The system opens the **Select available 'Watch cases (Case)' options** dialog. Here you can specify which options from the current category are available to your customers while purchasing the product.
2. Select **Allow only selected options**.
 3. Enable the **Leather** and **Glass** options.

The screenshot shows the 'Select available 'Watch cases (Case)' options' dialog. It has a title bar with a close button. Inside, there are two radio buttons: 'Allow all options' and 'Allow only selected options'. Below them is a table with columns: 'Name', 'Price adjustment', and 'Allow for sale'. The table contains three rows: 'Leather' (checked), 'Aluminium' (unchecked), and 'Glass' (checked). At the bottom right is a 'Save & Close' button.

Name	Price adjustment	Allow for sale
<input checked="" type="checkbox"/> Leather	+ \$24.99	Yes
<input type="checkbox"/> Aluminium	+ \$9.99	Yes
<input checked="" type="checkbox"/> Glass	+ \$19.99	Yes

4. Click **Save & Close**.

The system indicates that your customers can purchase the product with only two options.

General Attachments Metadata **Option categories** Categories Tax classes

Add categories New category

The following categories with product options are assigned to the product:

<input type="checkbox"/>	Actions	Category name	Type	Available options	Enabled
<input type="checkbox"/>		Watch cases (Case)	Products	2 of 3	Yes

Remove selected

Reviewing the product on the live site

1. Open the live site.
2. Select **Gifts** -> **Watches** in your on-line store main menu.
 - The system displays a list of all watches that you offer in your on-line store.
3. Click **Kentico Watch** to view the product's details page.
 - The system offers the watch with a leather and glass case only. This is because you set the *Aluminium* option as unavailable.
4. Select a leather case for the watch.
