

To start a blog on a site, create a new **Blog** page in the **Pages** application.

### To create a blog

1. Open the **Pages** application.
2. In the **Content tree** click where you want to create the blog.
3. Click on **New (+)**.
4. (Optional) Choose the **Blog** page type. An editing form opens.

The types of pages that you can create vary depending on how your administrator configured the system. For example, you may only be able to create blogs in a certain section of the site. If you are allowed to create a single type of page in the section, you are redirected directly to the page's editing form (step 5) without having to choose the page type.

5. Select a page template for the new blog and click on **Continue**.
6. Fill in the details of the new blog.
7. **Save** the new blog.

You can now [add blog posts](#) to the blog.
