

Out-of-the-box integrations

Salesforce

Automatically replicate contacts coming from your Kentico websites into your organization in SalesForce.

Product recommendations

Offer relevant products to your customers based on conditions that you define. The functionality uses the Strands Recommender engine.

SharePoint

Display data from a SharePoint server on your website.

Integration tools

REST service

Access and manipulate Kentico data using a RESTful web API.

Integration bus

Synchronize data between Kentico and any other application in real time.

Other integration options

- [Use the Kentico API and controls externally](#)
- [Combine the Kentico project with another application](#)
