

On this page you can configure settings related to the [search engine on your websites](#).

Search	
Exclude page types from SQL search	<p>Specifies the <a href="#">page types</a> that the system does <b>NOT</b> search when using the <a href="#">SQL search</a> (obsolete).</p> <p>You can specify multiple page types separated by semicolons (;).</p>
Exclude pages from SQL search	<p>Specifies site sections that the system does <b>NOT</b> search when using SQL search (obsolete).</p> <p>Use <a href="#">path expressions</a> to identify site sections or individual pages. You can enter multiple paths separated by semicolons (;).</p>
Enable smart search indexing	<p>Indicates whether the system creates indexing tasks whenever content covered by a search index is created, modified or deleted. Affects both <a href="#">Azure Search</a> and <a href="#">locally stored indexes</a>.</p> <p>This setting is only available if (<i>global</i>) is selected in the <b>Site</b> drop-down list, not for individual sites.</p>
Allowed attachment file types	<p>Specifies which file types are included when <a href="#">searching page attachments</a>. The smart search indexes the content of attachments along with the related pages.</p> <p>Only applies to indexes of the <b>Pages</b> type that have the <b>Include attachment content option</b> enabled for their allowed content (both <a href="#">Azure Search indexes</a> and <a href="#">local indexes</a>).</p> <p>Note: If no checkboxes are selected, all supported types of attachment files are indexed.</p>
