

Database table	Description
Integration_Connector	Stores the data of integration connectors registered in the system. Maps connectors to their assemblies and classes.
Integration_Task	Stores the data of outgoing and incoming integration tasks.
Integration_Synchronization	Stores relationships between integration tasks and connectors. <ul style="list-style-type: none">• Incoming tasks always have one matching record.• Outgoing tasks can have multiple records (if there are multiple connectors with the same subscriptions).
Integration_SyncLog	Stores logs of any errors that occur when processing integration tasks.
