

The settings in this category allow you to adjust the functionality of the [integration bus](#), which can connect Kentico with external third party systems. The integration synchronizes objects and pages (in both directions).

General	
Enable system integration bus	<p>Allows logging and processing of incoming and outgoing integration tasks.</p> <p>Integration tasks represent individual synchronization operations for objects or pages (create, update, delete etc.). The synchronization process consists of two steps:</p> <ul style="list-style-type: none"> • Logging - creation of integration tasks for actions that require synchronization. • Processing - execution of the integration tasks. <p>You can enable or disable logging/processing of incoming/outgoing tasks separately through the other settings in the category.</p>
Enable logging of incoming tasks	Indicates if the integration bus logs integration tasks received from external systems. To log tasks, the Enable system integration bus setting must also be enabled.
Enable processing of incoming tasks	Check to allow processing of integration tasks incoming from external systems. To process tasks, the Enable system integration bus setting must also be enabled.
Enable logging of outgoing tasks	Indicates if the integration bus logs changes made to pages and objects in Kentico as outgoing integration tasks. To log tasks, the Enable system integration bus setting must also be enabled.
Enable processing of outgoing tasks	Check to allow processing of outgoing integration tasks. To process tasks, the Enable system integration bus setting must also be enabled.
