

You can place banners on a page in the form of the Banner rotator [widget](#). The **Banner rotator** widget allows you to configure the *category*, *width*, and *height* of the displayed banners.

 Users with the **Design website** permission for the **Design** module can place banners on a page's **Design** tab as [web parts](#), which provide more configuration options.

Note that you can only add widgets on pages where the website's developers have prepared *editor widget zones*.

Adding the Banner rotator widget

To add the **Banner rotator** widget to a zone:

1. Open the **Pages** application on the **Page** tab.
2. Select a page in the page tree.
3. Open the zone menu (.
4. Click **Add new widget**.
5. Select the **Banner rotator** widget.
6. Click **Select**.
7. Set the widget's **Banner category**, **Width**, and **Height**.

8. Click **Save & Close**.
9. While still on the **Page** tab, click **Save** to confirm the changes to the page's widget content.

If you wish to configure more settings for the displayed banners than the **Banner rotator** widget provides, you can ask your administrator to [add banners as web parts](#).
