

When editing forum groups, you can adjust the following parameters:

General	
Group display name	The name of the forum group that will be displayed on the website.
Group code name	The name used in your code.
Description	Description of the forum group displayed on the website.
Forum group base URL	The URL of the page where the forum group is placed, for example: <i>~/MyForum.aspx</i> This is used by the system when creating URLs leading to the given forum group.
Forum group unsubscribe URL	URL of the page where users can unsubscribe from forums under the given group.
Advanced settings	
Require email addresses	Indicates if post authors must enter their e-mail address.
Display email addresses	Indicates if visitors can see email addresses of post authors.
Forum type	<ul style="list-style-type: none"> • User can choose – when creating a new thread, users can choose from the following two types. • Discussion forum – forum threads use a standard discussion format where users reply to previous posts. • Question-Answer forum – in forums of this type, the initial post of a thread is usually a question and the replies are attempts to answer it. The forum includes a voting feature that allows users to mark individual replies as helpful answers. Once a post receives the amount of votes specified in the Minimum votes to mark post as answer property, the post is designated as a valid answer and displayed accordingly.
Minimum votes to mark post as answer	Minimum number of votes that a post must receive to be marked as an answer in QuestionAnswer type forum.
Maximum image side size	Maximum size of a side of an image in pixels. If a larger picture is included in a forum post, it will be resized so that its larger side is equal to the entered value.
Attachment max. file size (kB)	Maximum file size of forum post attachments in kilobytes.

Security	
User can edit own posts	Indicates if users are allowed to edit their own posts when the posts are already on the forum.
User can delete own posts	Indicates if users are allowed to delete their own posts when the posts are already on the forum.
Use security code (CAPTCHA)	Indicates if forum posting requires users to pass CAPTCHA validation . This feature can help avoid spam in the forums.
Editor settings	
Enable WYSIWYG editor	Indicates if visitors can use the WYSIWYG editor for entering text. For security reasons, we strongly recommend setting the value to <i>No</i> for public forums.
Enable links in posts	Enables BB code for links.
Enable images in posts	Enables BB code for images.
Enable quotes in posts	Enables BB code for quotes.
Enable code snippets in posts	Enables BB code for code snippets – monospaced text.
Enable bold font in posts	Enables BB code for bold fonts.
Enable italics font in posts	Enables BB code for italic fonts.
Enable underlined font in posts	Enables BB code for underlined fonts.
Enable strike font in posts	Enables BB code for strike-through text.

Enable font colors in posts	Enables BB code for colored text.
