

This section is intended for developers and administrators setting up and configuring the system for content editors.

Blogs

Allow visitors to interact with and manage blogs on the site. Manage how users get notified about blog comments.

Categories

Predefine categories that content editors can use to distinguish pages. Categories can be based on criteria such as their topic.

Events

Create pages that display the events that content editors want to display on your site.

Media libraries

Configure how media content is displayed on the site. Define how editors manage media library content through the user interface. Set up means for site visitors to interact with media libraries on the live site.

Polls

Configure how editors can work with polls on the site.

Tags

Predefine tag groups that content editors use to sort content based on its topic. Configure how users tag pages and how tags are displayed on the live site.

The editor

Define different styles, personalize editor toolbars or add dictionaries to the spelling checker.

Workflows

Create basic and advanced workflows that govern the creation and editing of pages and define workflow steps. Configure which users can manipulate workflows based on the step they are currently in.
