

Marketers can use the information gathered by the **Contact management** application to keep track of the contacts who are currently visiting your websites. This allows you to monitor how many visitors a site has at any given time, check which pages are being viewed and manage the corresponding contact data as required.

To activate live contact monitoring:

1. Open the **Settings** application.
2. Click on **Security & Membership**.
3. Enable both of the following settings:
  - **Monitor on-line users**
  - **Store on-line users in database**
4. Click **Save**.

You can now view the [contacts that are currently online](#).
