

At this point you have basic knowledge of how to build a website. You know how to install a new **blank website**, how to define a **master page**, create **page templates** and how to add **new pages** based on page templates.

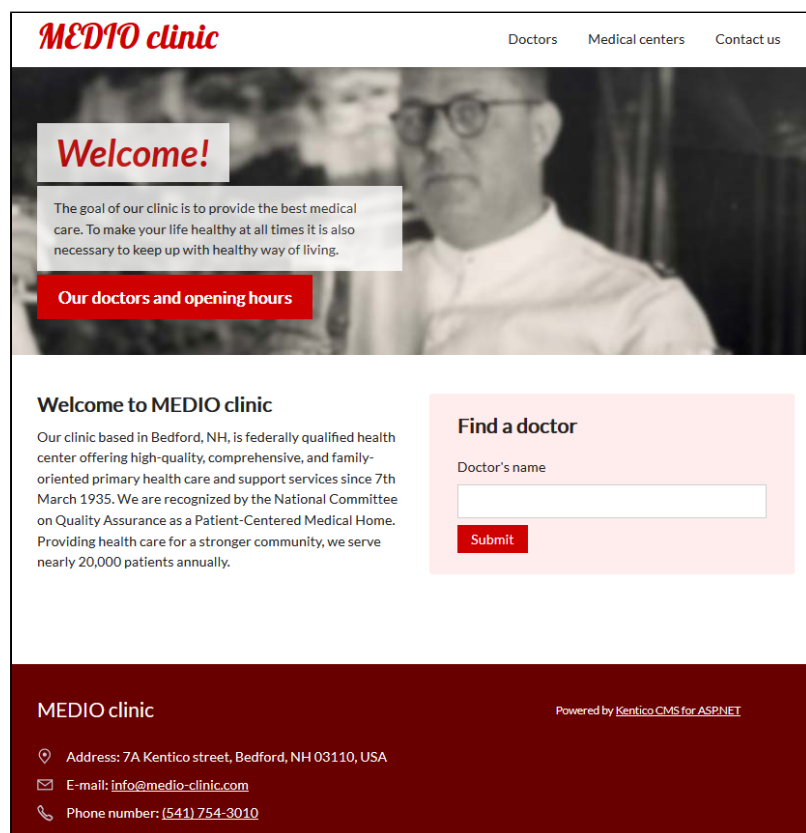

### How did you like the tutorial?

We hope you have enjoyed this short introduction into Kentico. Let us know how you liked the experience through the **Send us feedback** button at the end of this page!

## Take an e-learning course

We highly recommend attending our e-learning course, [Developer Essentials](#), which walks you through the process of building a website more thoroughly, while providing best practices, tips and optimization tactics.

In the e-learning course you will create a more complex medical clinic website.

## Engage in the community

Take a look at [devnet.kentico.com](https://devnet.kentico.com), where you can find the latest Kentico articles, released hotfixes, questions & answers section and also a form for submitting support issues.

## Learn how to deliver projects with Kentico

The [Kentico Advantage](#) guide will walk you through all phases of delivering a successful web project. This resource leverages the collective experience of our solution architects to identify best practices as well as pitfalls through every stage of a project.

## Continue learning

To continue learning how to build a website, see the following recommended topics:

- [Page types](#) – allow you to define custom website structures to store content separately from the page design. For example, we could create a Doctor page type to store information about doctors.
- [Editing pages](#) – see how content editors edit website pages in Kentico.
- [Widgets](#) – widgets are simplified web parts designed for use by content editors.
- [Setting up multilingual websites](#) – learn how to configure Kentico to display sites in multiple languages (cultures).
- [User management](#) – learn how to manage users in Kentico.
