

On this page, you can find out how you can allow the use of global objects in the Kentico E-commerce Solution.

 Only [users](#) with the **Global administrator** privilege level can configure the use of global objects in the **Store configuration** and **Multistore configuration** applications.

To enable (or disable) global e-commerce objects or settings:

1. Open the **Store configuration** application if you want to enable global objects or settings on the current site or the **Multi store configuration** application if you want to enable them [globally](#).

 If you are not sure what to choose, see [Choosing site or global e-commerce configuration](#). If you are not sure about specifics of configuring in these applications, see [Configuring e-commerce settings for a specific site or globally](#).

2. Switch to the **Store settings -> Global objects** tab.
3. To enable global e-commerce objects or settings, select the desired fields. To enable only site objects and settings, clear the desired fields.
 - If you operate in the **Store configuration** application, clear the *Inherit from global settings* property at the desired field.
 - If you operate in the **Multistore configuration** application, check that the *Inherit from global settings* property at the same location in the **Store configuration** application on all sites is enabled (the field is selected).
4. Click **Save**.

The system now uses those global objects and settings that you selected.
