

This page describes settings related to the [Authorize.NET payment gateway](#). The Authorize.NET settings can be configured in the **Settings** application, within the **E-commerce -> Payment gateways -> Authorize.NET** category. These settings are not available in the **Store configuration** or **Multistore configuration** application.

General	
API login	<p>The <i>API login ID</i> for the related account in the <b>Authorize.Net Merchant Interface</b>:</p> <ul style="list-style-type: none"> <li>• <a href="https://account.authorize.net/">https://account.authorize.net/</a> – for real payments on production websites.</li> <li>• <a href="https://sandbox.authorize.net/">https://sandbox.authorize.net/</a> – for test payments.</li> </ul>
Transaction key	<p>The <i>Transaction key</i> obtained for the related account in the Authorize.Net Merchant Interface.</p>
Transaction type	<p>Sets the type of transactions used by the Authorize.NET gateway during payment:</p> <ul style="list-style-type: none"> <li>• <b>Authorize and Capture</b> – successfully authorized transactions are automatically submitted for settlement.</li> <li>• <b>Authorization with Delayed Capture</b> – only authorization occurs during the initial payment (places a hold on the transaction amount). Capturing of funds needs to be done manually at a later time by <a href="#">editing orders</a>. Delayed capture transactions are suitable for stores where products are physically shipped some time after orders are placed.</li> </ul>
