 The web parts described on this page use the SQL search engine. You can also try [index-based searching](#) provided by the Smart search application.

Smart search offers better performance than SQL search but requires more configuration steps.

If you want to let users search forum posts for some text, you can use the **Forum search box** and **Forum search results** web parts. You will typically place them both on the same page. However, if you need to place the Forum search box on a different page, you can set its **Redirect to URL** property to the page where you have the Forum search results web part, such as `~/SearchForum.aspx`.

You can also use the **Forum search - advanced dialog** web part, which offers a larger dialog allowing users to specify multiple search parameters.

Search keywords: product

Written by: administrator

Search within: Subject and text

Sort results by: Post time # Ascending Descending

Search

Search results for product : 2 occurrences found.

RE: Apple iPad 2

H I there, good news for you, the iPad 2 is already available. You can order it right now in the Products section, under Laptops and Tablets. And the price is only \$519.99, nothing but a great deal for such a masterpiece hardware!

 **Tip:** If you want to use the basic search box by default, but want to let users have the option of using the advanced dialog as well, enter the path to the page containing the **Forum search - advanced dialog** web part into the **Advanced search path** property of the **Forum search box** web part. This displays the **Advanced search** link next to the search box.
