

You can configure settings related to [Community features](#) in **Settings -> Community**.

Groups	
Group template path	<p>Alias path of the page that will be used, together with the pages stored under it, as a template for newly created <a href="#">groups</a>, e.g. <i>/Groups/Template</i>.</p> <p>The value of this setting is used by the <b>Group registration</b> web part if its <b>Template source alias path</b> property is empty.</p>
Groups security access denied path	Alias path of a page to which users will be redirected when they try to access pages of a group they don't have permissions for. This page should contain the Group security message web part, e.g. <i>/Groups/{GroupName}/Access</i> .
Group management path	Alias path of the group management page, containing the Group profile web part, e.g. <i>/Groups/{GroupName}/Management</i> .
Group profile path	Alias path of the group profile page; e.g. <i>/Groups/{GroupName}</i> , where <i>GroupName</i> is a wildcard replaced by the name of a given group.
Group invitation	
Invitation acceptance path	Alias path of the page containing the Group invitation web part; this is a special web part handling requests for joining a group when a user clicks the joining link in group invitation e-mail, e.g. <i>/Special-pages/Invitation-acceptation</i> .
Group invitation expires after (days)	When some user receives a group invitation e-mail, the link for joining the group included in the e-mail will be active for the number of days entered here. After the specified duration, the link will no longer be functional. If 0 is entered, the link will be functional permanently.
Members	
Member management path	Alias path of the member management page, e.g. <i>/Members/Management</i> .
Member profile path	Alias path of member the profile page, e.g. <i>/Members/{UserName}</i> , where <i>UserName</i> is a wildcard replaced by the name of a given user.
Enable friends	Indicates if the Friends functionality should be available in other modules on the live site.
Friend management path	Node alias path of a page with the Friendship management web part. This is a special web part for handling friendship approval or rejection requests.
Activity points	
Enable user activity points	If checked, <a href="#">activity points</a> will be logged for users.
Activity points for blog post	Sets the number of activity points that users receive for adding a blog post.
Activity points for blog comment post	Number of activity points that users receive for adding a blog post comment.

Activity points for forum post	Number of activity points that users receive for adding a forum post.
Activity points for message board post	Number of activity points that users receive for adding a message board post.
Content management	
Use parent community group for new pages	Indicates if new pages should inherit the value of the <b>Owned by group</b> property from their parent page.
