

You may want to attach files directly to pages when, for example, your site is set up to list files attached to pages on a page. If you want to upload larger files, such as videos, to the system, using [media libraries](#) are usually a better choice.

An advantage of page attachments is that you can attach files related to a page directly to the page. This means that they also stay with the page when you are moving the page elsewhere.

To attach a file to a page

1. Open the **Pages** application.
2. Navigate to the page to which you want to attach a file.
3. Switch to the **Properties -> Attachments** tab.

4. Click on **New attachment**. A dialog window opens.
5. Choose the file that you want to attach to the page.
6. Click on **Open**.

The system uploads the file to the page.
