

When configuring an e-commerce setting that can be both site and global, you can choose between the **Store configuration** and **Multistore configuration** application. On this page, you can find out when to use which application and to what you should pay attention.

- [Using Store configuration for site settings](#)
- [Using Multistore configuration for global settings](#)

Using the Store configuration application

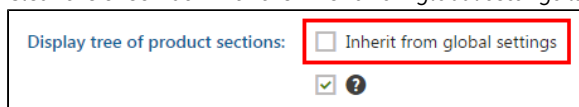

Choose the **Store configuration** application if you want to set the setting for the current site.

- ✓ Some of the store settings are also (or only) available in the **E-commerce** setting category in the **Settings** application if you select your current site in the **Site** drop-down list. You can check the availability of each setting in [Settings - E-commerce](#).

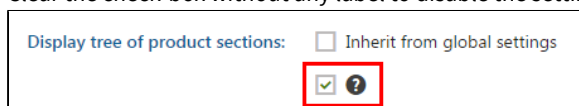

If you want to configure settings for a specific site:

1. Open the **Store configuration** application and navigate to the specific setting.
2. Set whether the specific setting should be inherited from global settings (settings [configured in the Multistore configuration application](#)).
 - Select the check-box with the *Inherit from global settings* label to inherit the specific setting from global settings.
 - Clear the check-box with the *Inherit from global settings* label to configure the setting for the specific site.

3. If you cleared the inheriting check-box, enable or disable the setting.
 - Select the check-box without any label to enable the setting.
 - Clear the check-box without any label to disable the setting.

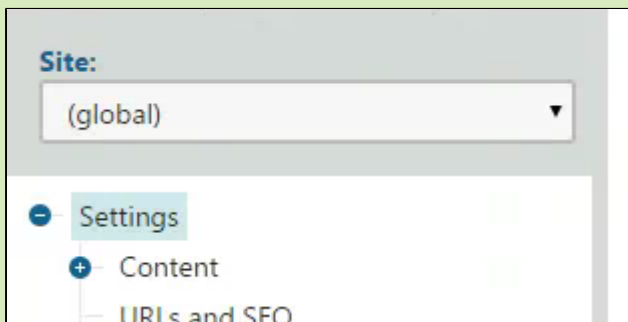

4. **Save** your changes.

The system then acts according to your site and global setting changes.

Using the Multistore configuration application

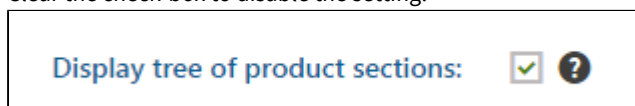

Choose the **Multistore configuration** application if you want to set the settings globally.

- ✓ Some of the multistore settings are also (or only) available in the **E-commerce** setting category in the **Settings** application if you leave (*global*) in the **Site** drop-down list. You can check the availability of each setting in in [Settings - E-commerce](#).

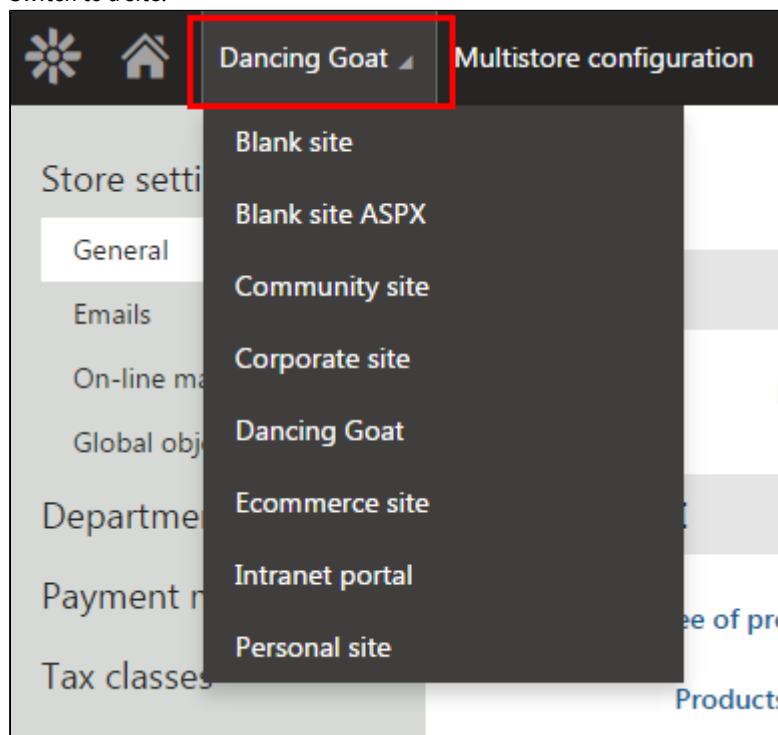

If you want to configure settings globally:

1. Open the **Multistore configuration** application and navigate to the specific setting.
2. Enable or disable the setting.
 - Select the check-box to enable the setting.
 - Clear the check-box to disable the setting.

3. **Save** your changes.
4. Check that all sites inherit from global settings.
 - a. Switch to a site.

- b. Open the **Store configuration** application and navigate to the specific settings.

- c. Select the check-box with the *Inherit from global settings* label to inherit the specific setting from global settings.

Display tree of product sections: ☒ Inherit from global settings

☐ ?

- d. **Save** your changes.
e. Repeat the check for all your sites.

The system then acts according to your site and global setting changes.
