

You can edit files attached to a page in **Pages -> Properties -> Attachments**. If you edit an image, Kentico opens its [built-in image editor](#) that allows you to perform operations like resizing, rotating and others. For other file types, you can [edit metadata](#) — information about the attached file, such as **Title** and **Description** — only.

To edit files attached to a page

1. Open the **Pages** application.
2. Click on the page to which the files that you want to edit are attached.
3. Switch to **Properties -> Attachments**.

4. **Edit** (🔗) an attachment. If you edited an image file, an [Edit image](#) dialog opens. Otherwise, an [Edit metadata](#) dialog opens.
5. Make changes to the attachment.
6. Click **Save & Close** to confirm the changes.

The system saves the modified file.
