

This page explains how to use printer friendly CSS styles on your website. These styles are used only if a page is sent to a printer.

1. Create a new stylesheet in the **CSS stylesheets** application.
2. Name the stylesheet *Printer styles* and set the **Code name** to *Printer\_styles* (for example).
3. Write the printer friendly CSS styles, for example:

#### CSS

```
.zoneLeft, .zoneRight, .zoneTopInfo, .zoneTop, .horizontalmenu, .zoneBottom {
    display: none;
}

.eventCalendarDetail .zoneLeft, .eventCalendarDetail .zoneRight {
    display: block;
}

.eventCalendarDetail .zoneRight {
    float: left;
}

.logonReg .zoneLeft, .logonReg .zoneRight {
    display: block;
}

.logonReg .zoneRight {
    float: left;
}

.zoneContent {
    float: left !important;
}
```

**Tip:** To hide elements that you do not want in the print version, add the **display:none;** style to the appropriate classes.

4. Add a link to the printer CSS stylesheet into the *<head>* tag of your master page:

- a. Open the **Pages** application.
- b. Select the root page of your website.
- c. Switch to the **Master page** tab.
- d. Add the link into the **head** section. For example:

```
<link href="CMSPages/GetResource.ashx?stylesheetname=Printer_styles" type="
text/css" rel="stylesheet" media="print" />
```

- e. Click **Save**.

The stylesheet applies to the **print** media, i.e. when your sites pages are sent to a printer.
