

By default, blog moderators can moderate blog comments in the **Pages** application. You can configure the **Comment view** web part to allow users to **Edit** and **Delete** blog comments on the live site. Note that the **Comment view** web part allows **Approving** and **Rejecting** of blog comments without any configuration. You can also allow abuse reporting for certain users or roles in the web part.

## To allow users to moderate blog comments using the Comment view web part

1. In the **Pages** application, navigate to the page that contains the **Comment view** web part.
2. **Configure** the web part
3. Under **Editing buttons**, turn the **Show edit button** and/or the **Show delete button** check-box on.
4. (Optional) Under **Abuse report**, define who can report abuse using the web part.
5. Define **Who can report abuse**.
6. Confirm by **OK**.

Blog moderators can now moderate comments on the live site.
