Creating product options

Each product option in the Kentico E-commerce Solution belongs to a product option category. To be able to use product options, you first need to create product option categories.

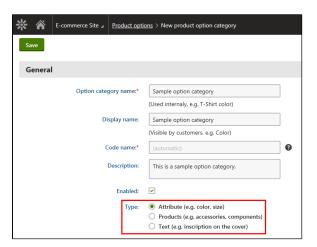

Creating product option categories

You can create product option categories in the **Product options** application.

- 1. Click New product option category.
- 2. Enter category properties in the **General** category.

Based on your selection of the type of the category, the system displays more properties in the Options category.

- Attribute the options represent product attributes, e.g., product's different colors or sizes.
- **Products** the options represent separate products that your customers can optionally purchase together with the main product, e.g. you can offer PCs with printers as options. Options in this category can also represent components of a product, e.g. hardware components of a configurable PC.
- **Text** the options allow your customers to purchase products with optional texts. For example, you can offer books with inscriptions.

- 3. Click Save.
 - The system displays the **Options** category.
- 4. Enter category properties in the Options category.
 - Options category available for the Attribute and Products type option categories:

• Options category available for the Text type option category:

5. Click Save.

The system creates an empty product option category of the selected type. You can now add product options to the category.

Creating product option categories while editing products

You can also create product option categories in the **Products** application while editing products on the **Options -> Option categories** tab.

- 1. Click New category.
- 2. Enter category properties (see Step 2 through Step 4 in this section).
- 3. Click Save and close the dialog.

If you create a product option category this way, the category is automatically assigned to the respective product.

Adding product options to product option categories

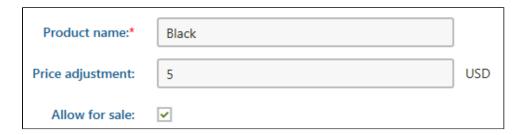

You can add product options only to product option categories of the **Attribute** and **Products** types.

This is because categories of the **Text** type contain only one option, which the system adds automatically.

You can add new product options to existing product option categories in the **Product options** application.

- Select a product option category and click Edit (
- 2. Switch to the **Options** tab.
- 3. Perform the corresponding action:
 - Click **New option** if you are adding a new option to a category of the **Attribute** type.
 - Click **New product** if you are adding a new option to a category of the **Products** type.
- 4. Enter option properties.
 - Adding a product option to a category of the **Attribute** type:

• Adding a product option to a category of the **Products** type:

General		
Product name:*	Intel Core i7 3770	
SKU:	11-5689-754	
Price:	329	USD
Department:	Computers	New
Manufacturer:	Intel ▼	New
Supplier:	Hardware, Ltd. ▼	New
Representing:	Standard product	
Status		
Allow for sale:	▽	
Shipping		

5. Click Save

(Optional) Click Save and create another instead if you want to create more than one option.

The system adds product options to the given category. You can now use the options in your on-line store. For example, you can add the options to selected products, modify options' properties, etc.

Adding product options to product option categories while editing products

You can also add product options to product option categories in the **Products** application while editing products on the **Options -> Option categories** tab.

- 1. Select a product option category and click **Edit category properties** ().
- **2.** Switch to the **Options** tab .
- 3. Perform the corresponding action, i.e., New option or New product.
- **4.** Enter option properties (see <u>Step 4</u> in this section).
- **5.** Click **Save** and close the dialog.
 - (Optional) Click **Save and create another** instead if you want to create more than one option.

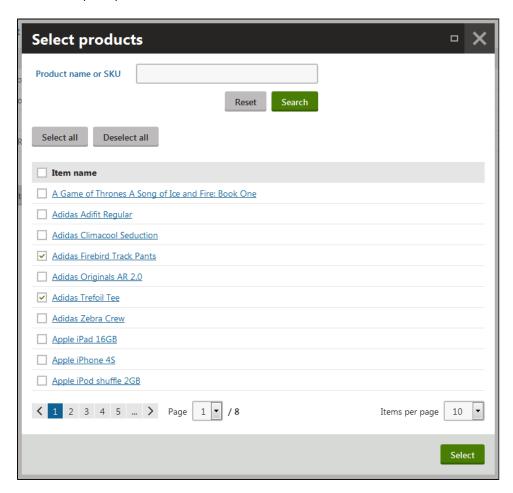

Adding product options to products

In Kentico, you cannot add product options to your products directly. If you want to use options for your products, you must add to each product at least one (non-empty) option category. Later you can specify that the system should use only selected options from the assigned categories (applies to Attribute and Products categories only) for the products. Otherwise, the system uses all options from these categories.

Adding product option categories to products

You can add product option categories to products in the **Product options** application.

- 1. Select a product option category and click **Edit** ().
- 2. Switch to the **Products** tab.
- 3. Click Add products to open the Select products dialog.
- 4. Select the required products.

5. Click Select.

The system adds the current product option category to the selected products including **all product options contained in the category**. You can now specify which options from this category the system should use for the products.

ons -> Option categories tab.

Adding product option categories to multiple products at once (while editing a product)

- 1. Select a product option category and click **Edit category properties** ().
- 2. Switch to the **Products** tab.
- ${\bf 3.}\,$ Click ${\bf Add}\,$ products to open the ${\bf Select}\,$ products dialog.
- **4.** Select the required products.
- 5. Click Select.

The system adds the current product option category to the selected products including all product options contained in the category.

Adding multiple product option categories to the currently edited product

1. Click Add categories to open the Select product option categories dialog.

- 2. Select the required categories.
- 3. Click Select.

The system adds the selected product option categories to the currently edited product including all product options contained in the categories.

Adding a new product option category to the currently edited product

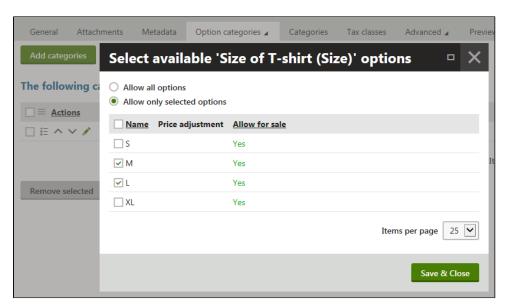

- 1. Click New category.
- 2. Enter category properties.
- 3. Click **Save** and close the dialog.

The system assigns the new option category (empty) to the currently edited product. Now you need to <u>add</u> some options to this category.

Selecting available options for products

You can specify available options for products while editing the products in the **Products** application.

- 1. Select a product and click **Edit** (?).
- 2. Switch to the **Options -> Option categories** tab.
- 3. Select a product option category (if available) and click **Select available options** (in).
 - The system opens a dialog where you can specify available options for the product.

- (Optional) If the system doesn't offer any product option category for the product, you can <u>add</u> some by clicking Add categories.
- (Optional) If the system doesn't offer any product option category for the product, you can <u>add</u> a new category by clicking **New category**.
- 4. Select the options as required.
 - Allow all options the system offers all product's options from the current category to the users.
 - Allow only selected options the system offers only selected products' options from the current category to
 the users.

It is recommended to select **Allow only selected options** and select some or all options. If you do so, you can then add more options to the option category and it will not have any effect on already created products and their options (the products will be offered with their specified options).

However, if you select **Allow all options**, any new option added to the option category will be also offered for the already created products.

5. Click Save & Close.

The system now offers only those product options which were specified for the product.

Applying taxes to product options

The Kentico E-commerce Solution allows you to specify which <u>taxes</u> should apply to product options that belong to product option categories of the **Products** type.

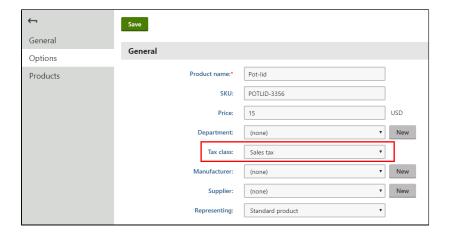

Product options from other category types (Attribute and Text) use tax classes assigned to the main products.

This means the options use tax classes assigned to the products with which you offer them.

You can add taxes to product options in the **Product options** application.

- 1. **Edit** () a product option category of the **Products** type.
- 2. Switch to the **Options** tab.
- 3. **Edit** () a product option.
- 4. Select the desired tax class in the **Tax class** field.

5. Click Save.

The system adds the taxes to the product option. When your customers purchase products with this option, the system applies the selected taxes to the option.

Applying taxes to product options while editing products

You can also apply taxes to product options in the **Products** application while editing products on the **Options -> Option categories** tab.

- 1. **Edit** (♠) a product option category of the **Products** type.
- 2. Switch to the **Options** tab.
- 3. **Edit** () a product option.
- 4. Select the desired tax class in the **Tax class** field.
- 5. Click Save.

Modifying product options

You can modify product options in the **Product options** application.

- 1. Select the product option category that contains the option you want to modify and click **Edit** ().
 - The system opens the category's **General** tab where you can modify option category properties.
- 2. Switch to the **Options** tab.
- 3. Select a product option and click **Edit** ().
- 4. Modify <u>product option properties</u> as required.
- 5. Click Save.

You can now use the product option (product option category) with its updated settings.

You can also modify product options in the **Products** application while editing products on the **Options -> Option** categories tab.
