

To install Kentico, run the *Kentico_11_0.exe* file, which opens the **Kentico Installer**:

Installing Kentico

Evaluation

You can begin by installing Kentico for evaluation purposes.

Local installation

Check if your development server meets the <u>recommended configuration</u>.

Install Kentico on your local computer by following our <u>custom installation guide</u>. If you come across any difficulties with selecting the right options, see <u>Installing Kentico (Q&A)</u> for recommendations.

Remote installation

Check if your development server meets the <u>recommended configuration</u>.

Develop your website on a remote server or set up a production environment. You will find detailed procedures for this type of installation in the <u>Deploying Kentico to a live server</u> section.

Where to get more information?

To learn how to develop websites, see the Kentico 11 Tutorial.

You can also visit our portal for developers with blogs, forums, knowledge base and other documentation material at DevNet.

If you need advice on how to use Kentico, feel free to <u>contact our support</u>. The support team operates non-stop and will be happy to help you.
