Marketers can use the information gathered by the **Contact management** application to keep track of the contacts who are currently visiting your websites. This allows you to monitor how many visitors a site has at any given time, check which pages are being viewed and manage the corresponding contact data as required.

To activate live contact monitoring:

- 1. Open the **Settings** application.
- 2. Click on **Security & Membership**.
- 3. Enable both of the following settings:
 - Monitor on-line users
 - Store on-line users in database
- 4. Click Save.

You can now view the contacts that are currently online.
