You can control access to staging actions by configuring user role permissions.

To configure permissions for content staging:

1. Open the **Permissions** application.
2. Select your site.
3. In the first **Permissions for** drop-down list, choose **Module**.
4. In the second drop-down list, choose **Staging.**

The changes you make on the permission matrix apply immediately.

In the permission matrix, you can grant the following permissions:

- **Manage servers** – allows members of the roles to manage target server configurations on the **Servers** tab of the **Staging** application.
- **Manage all tasks** – allows access to the **All tasks** tab of the **Staging** application, and synchronization/management of synchronization tasks.
- **Manage page tasks** – allows access to the **Pages** tab of the **Staging** application, and synchronization/management of synchronization tasks.
- **Manage object tasks** – allows access to the **Objects t**ab of the **Staging** application, and synchronization/management of synchronization tasks.
- **Manage data tasks** – allows access to the **Data** tab of the **Staging** application, and synchronization/management of synchronization tasks.
- **Manage task groups** – allows members of the roles to create, edit, and delete staging task groups (globally for all sites). Affects the **Task groups** tab of the **Staging** application and group creation via the dialog in the administration interface header. The *Manage task groups* permission is NOT required to switch to the context of existing task groups.

Role	Manage servers	Manage all tasks	Manage page tasks	Manage object tasks	Manage data tasks	Manage task groups
