The Polls application allows you to create, edit and publish polls on your websites created with Kentico. There are two types of polls:

- **Global poll** - the poll is shared across more websites. Administrators can restrict access to global polls.
- **Site poll** - the poll has a relationship with a particular site. Such a poll is not accessible from other sites.

Using Polls, you can display voting statistics in the form of a graph. The graph represents either the absolute number of votes or a percentage. Besides, the module enables you to control whether single or multiple answers will be allowed on the page.
