When a new group is created, the system assigns to it a default avatar. After that, group administrators can change the group's avatar using the **Group profile** web part.

Users can delete the avatar, upload a custom one, or select a predefined avatar.

You can find a live example of this on the **Community Starter site**. Sign in as a group administrator (e.g. *Josh* with blank password, Josh is the *Australian travellers* group admin) and click **Groups** in the main menu. You should see the **Australian travellers** group in the **Your groups** section. Click it and then use the **Manage the group** link in the **Shortcuts** section on the right.

Changing group avatars in the administration interface

Site administrators can change the avatar of any group. To change a group's avatar, open the **Groups** application and edit this group on the **General** tab.
