ℹ️ This page is a part of a tutorial, which you should follow sequentially, from the beginning to the end. Go to the first page: Getting started with Kentico.

You will learn about:

- The Pages application in MVC sites
- Adding the Home page
- Adding the Medical center page
- Adding the navigation menu
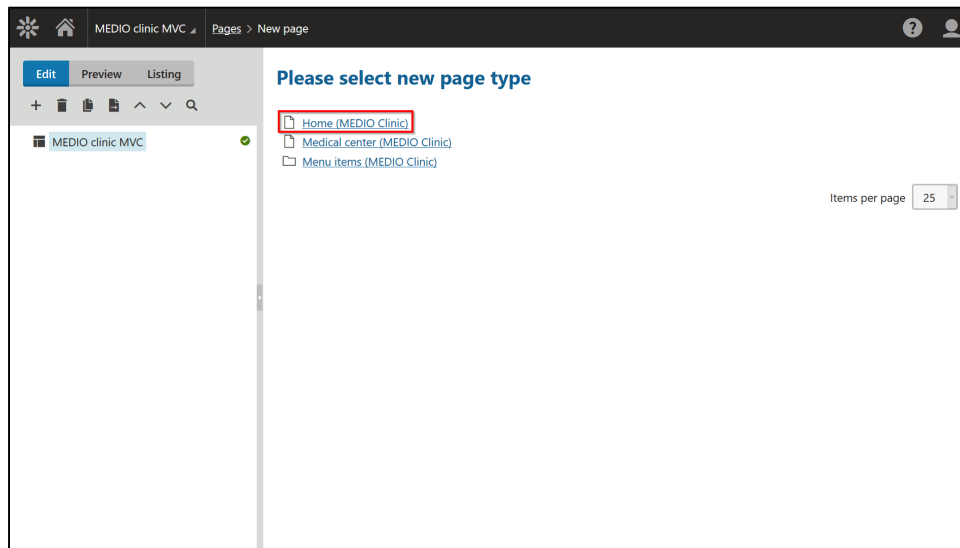

The Pages application in MVC sites

The **Pages** application allows you to create pages and modify the content of your website. The lean interface of the *Pages* application in MVC sites supports effective content creation. Editors don't need to pay any attention to modeling or designing of what they are putting in. They enter their content, and your MVC application formats and displays the data on the live site.

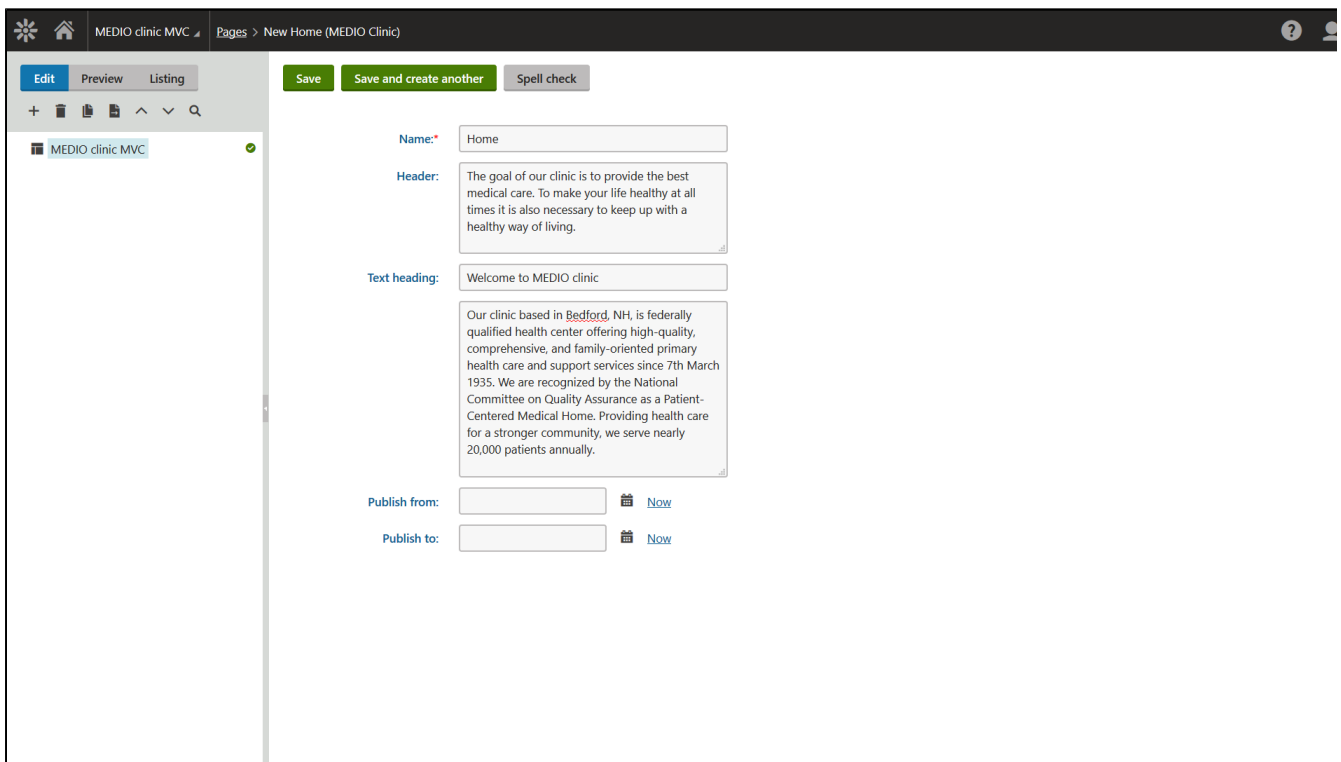

Adding the Home page

1. In the **Pages** application, click the **New** (➕) button above the content tree.

2. From the list of available page types, select the **Home (MEDIO Clinic)** page type.

3. In the page editor window, enter the following values:
   - **Name**: Home
   - **Header**: The goal of our clinic is to provide the best medical care. To make your life healthy at all times it is also necessary to keep up with a healthy way of living.
   - **Text heading**: Welcome to MEDIO clinic
   - **Text**: Our clinic based in Bedford, NH, is federally qualified health center offering high-quality, comprehensive, and family-oriented primary health care and support services since 7th March 1935. We are recognized by the National Committee on Quality Assurance as a Patient-Centered Medical Home. Providing health care for a stronger community, we serve nearly 20,000 patients annually.
4. Click **Save**.

The system adds the new *Home* page under your **MEDIO clinic MVC** root.

Adding the Medical center page

1. Select the **MEDIO clinic MVC** root.
2. Click the **New** (✚) button above the content tree, and select the **Medical center (MEDIO Clinic)** page type.
3. Enter the following values for your *Medical center* page:
   - **Name**: Medical center
   - **Header**: Medical center of the MEDIO clinic
4. Click the **Source** button in the WYSIWYG editor, and add the following text with HTML markup into the **Text** field.

```
<h1>Medical center</h1>
<p>A clinic (or outpatient clinic or ambulatory care clinic) is a healthcare
facility that is primarily devoted to the care of outpatients. Clinics can be
privately operated or publicly managed and funded, and typically cover the primary
health care needs of populations in local communities, in contrast to larger
hospitals which offer specialized treatments and admit inpatients for overnight
stays. Some clinics grow to be institutions as large as major hospitals, or become
associated with a hospital or medical school while retaining the name "clinic".
</p>
```

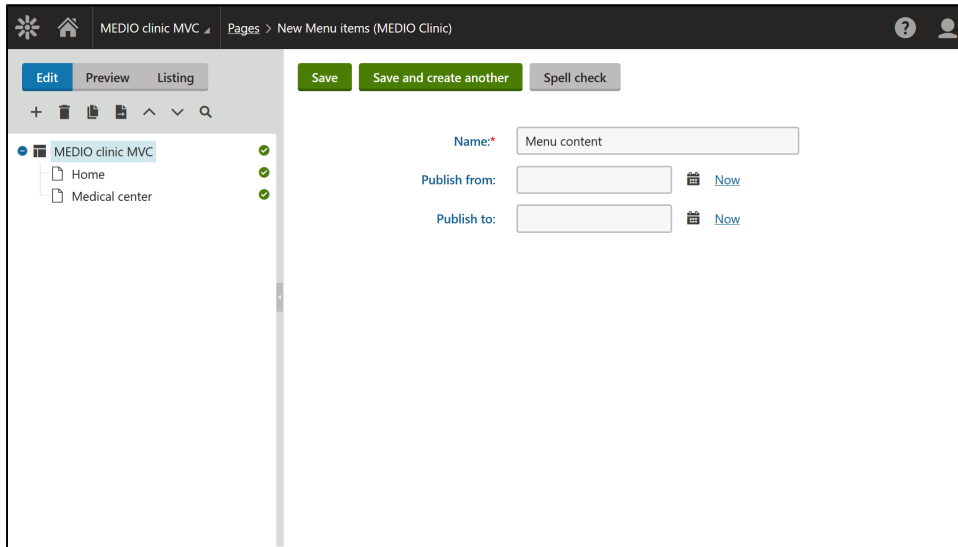

5. Click **Save**.

The system adds your second page to the content tree and displays the content using Kentico administration interface's default styling preferences. You will style the actual website's appearance when are developing the MVC application.

Adding the navigation menu

Separating the menu items from the pages

1. Select the **MEDIO clinic MVC** root page, and click the **New** (✚) button.
2. From the list of available page types, select the **Menu items (MEDIO Clinic)** page type.
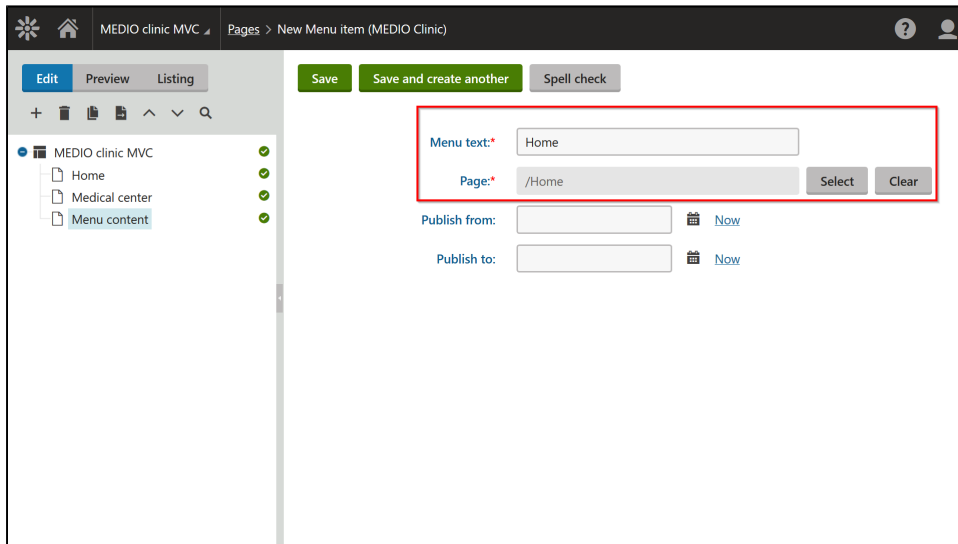

3. Enter *Menu content* into the **Name** field.

4. Click **Save**.

The system adds the section under which you will create your menu items.
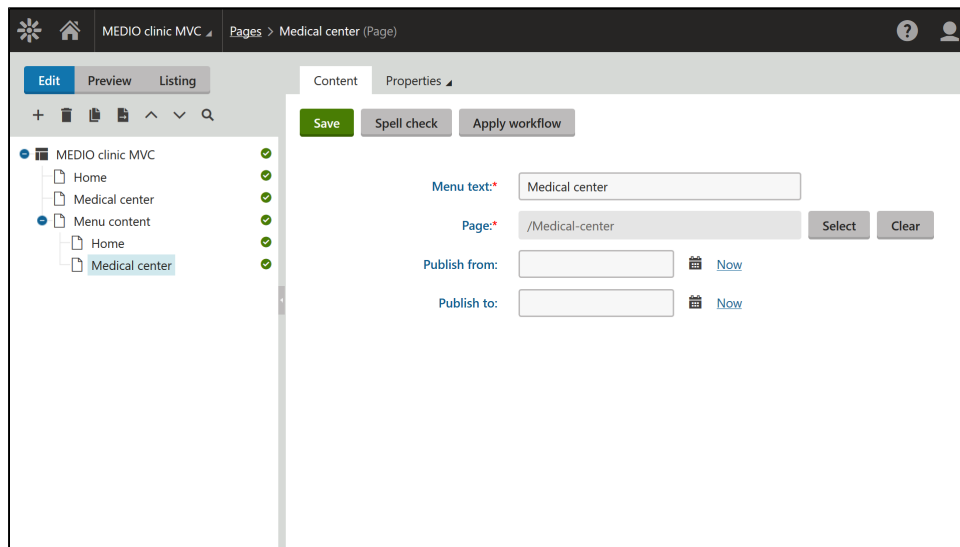

Creating individual menu items

1. Make sure the **Menu content** page is selected.
2. To add the *Home* page to the navigation, click the **New** (✛) button.
3. Enter *Home* into the **Menu text** field.
4. Click the **Select** button next to the **Page** field, and choose *Home* in the content tree to set up the menu item destination.

5. Click the **Save and create another** button.

The system creates your *Home* menu item and displays the dialog window for adding a second item to the navigation.

1. Enter *Medical center* into the **Menu text** field.
2. In the **Page** field, select the *Medical center* page in the content tree.
3. Click **Save**.

The content of the site's pages and menu is ready. Now, you need to switch to Visual Studio and design the site in the MVC application.
