After you create a new form and design it using the Form builder or the Field editor, you can add the form to your website's pages:

- Using the **Insert Form** icon on the text editor toolbar
- Using the **On-line form** web part
- Using the **On-line form** widget

Adding forms into text

1. Open the **Pages** application.
2. Select a page in the content tree that has editable regions.
3. Click where in an editable form you want to place a form.
4. Click **Insert Form** on the editor toolbar. The system displays a configuration dialog of the inline widget.

5. Click **Select** next to the **Form name** field and choose a form.
6. Click **Save & Close**. The system pastes a placeholder image into the text. You can edit the properties of the on-line form inline widget at any time by double clicking this image.
7. Click **Save**.

Now you can switch to **Preview** mode to see the form on the page.

Try entering some values and submitting the filled-in form. You can then manage the data submitted through the form.

Adding a form using the On-line form web part

1. Open the **Pages** application.
2. Select a page in the content tree.
3. Switch to **Design** mode.
4. Place the **On-line form** web part.
5. Click **Select**.
6. Click **Select** next to the **Form name** property and choose a form.
7. Specify rest of the web part properties.
8. Click **Save & Close**.

The system inserts the **On-line form** web part into the chosen zone.

Now you can switch to **Preview** mode to see the form on the page.

Try entering some values and submitting the filled-in form. You can now manage the data submitted through the form.

Adding a form using the On-line form widget

1. Open the **Pages** application.
2. Select a page in the content tree that has an editor widget zone.
3. Open the menu of the widget zone (☰).
4. Click **Add new widget**.
5. Choose the **Forms & Surveys -> On-line form** widget.
6. Click **Select.**
7. Click **Select** next to the **Form name** property and choose a form.
8. Click **Save & Close**. The system places the **On-line form** widget into the chosen zone.
9. Click **Save** to confirm the change to the page's widget content.

Now you can switch to **Preview** mode to see the form on the page. Try entering values and submitting the filled-in form. You can now manage the data submitted through the form.
