The **Friends** application comes with the following web parts. You can find the web parts in the **Community -> Friends** web part category.

Friends viewer

This web part can typically be used on the user profile page for viewing the current user's friends. If you right-click the avatar image of a friend, the system offers several friends management tasks.

The following web parts are on-site equivalents of the Friends management administration interface described in Managing friends.

Friends list

This web part displays a list of all friends of the current user.

Friendship management
This web part allows users to manage friendship through a given GUID.

Friends waiting for approval

This web part displays a list of all users waiting for the current user's approval of friendship.

Rejected friends

This web part displays a list of all users whose friendship was rejected by the current user. The listed users cannot request the current user's friendship.

My pending requests

This web part displays a list of all users whose friendship was requested by the current user.

Request friendship

This web part displays a link that, when clicked, opens the **Add a new friend** dialog.

My friends

This web part combines the functions of the above mentioned web parts. It fully covers the functionality of the **Friends** application.
