At this point, you have basic knowledge of how to build a simple website using Kentico **MVC development**. You know how to create a new **MVC blank website** and define **content only page types** to **add data** to your website. You also know how to **display the content of the pages** on the live site, as well as **create a dynamic navigation menu** in a separate **MVC application**.

How did you like the tutorial?

We hope you have enjoyed this short introduction to Kentico. Let us know how you liked the experience through the **Send us feedback** button at the end of this page!

Engage in the community

Take a look at devnet.kentico.com, where you can find the latest Kentico articles, released hotfixes, a questions & answers section and also a form to submit support issues.

Learn how to deliver projects with Kentico

The Kentico Advantage guide will walk you through all phases of delivering a successful web project. This resource leverages the collective experience of our solution architects to identify best practices as well as pitfalls through every stage of a project.

Note that some information in the guide may not apply to the MVC development model.

Continue learning

To continue learning how to build a website, see the following recommended topics:

- Supported and unsupported Kentico features on MVC sites – find out which Kentico features are available for MVC sites.
- Working with forms on MVC sites – learn how to add forms to your website.
- Working with users on MVC sites – read about user management on MVC sites.
- Working with media libraries on MVC sites – learn how to display content from media libraries on your website.
