- Smart search (with all types of search indexes except custom indexes)
- SQL debugging
- Web farms
- Workflow – basic and advanced

Kentico features not supported for MVC sites

Features or scenarios that are not included in the supported list above are not fully tested. You may be able to implement some of the functionality in your MVC application, but we cannot guarantee that everything will work correctly.

For example, the following features are currently not supported:

- Continuous integration
- Device profiles
- Google Sitemaps
- Integration bus
- Macro resolving
- Other e-commerce features

- Other on-line marketing features
- Page aliases
- Staging (for objects not created via the administration UI)
- Web parts
- Widgets

For more information about specific scenarios, please contact our support with a detailed description of your requirements.
