In this section of the Kentico E-commerce Solution documentation, you can find examples and guidelines about customizing [payment methods and payment gateways](#).

Creating a custom payment gateway 1

Allow your customers to pay using any required payment provider or service by developing custom payment gateways.

Making payment methods dependent on shipping options

Limit specific payment methods to be available only when specific shipping options are selected.

Working with payment results

Process data from performed payments that are stored in the system in the XML format.
