You can configure settings related to groups in **Settings -> Community**.

Groups	
Group template path	Alias path of a page used, together with pages stored under it, as a template for newly created groups, for example */Groups/Template.*
Groups security access denied path	Alias path of a page where users are redirected when trying to access pages of a group for which they don't have permissions. For example, */Groups/{GroupName}/Access*, where *{GroupName}* is replaced by the current group name. This page should contain the **Group security message** web part.
Group management path	Alias path of the group management page containing the **Group profile** web part. For example, */Groups/{GroupName}/Management*, where *{GroupName}* is replaced by the current group name.
Group profile path	Alias path of the group profile page. For example, */Groups/{GroupName}*, where *{GroupName}* is replaced by the current group name.
Group invitation	
Invitation acceptance path	Alias path of a page containing the **Group invitation** web part. This is a special web part handling requests for joining a group when a user clicks the joining link in a group invitation email, for example */Special-pages/Invitation-acceptation*.
Group invitation expires after (days)	When a user receives a group invitation email, the link for joining the group included in the email is active for a number of days specified in this field. When the group invitation expires, the link is no longer functional. If you enter *0*, the link is functional permanently.
Content management	
Use parent community group for new pages	Indicates if new pages inherit the value of the **Owned by group** property from their parent page.
