You can allow users to subscribe to notifications using the **Notification subscription** or **Content subscription** web part (*Content subscription* is a specialized version of *Notification subscription*). Site visitors can subscribe to notifications about the following types of events:

- **Page has been created**
- **Page has been updated**
- **Page has been deleted**

Setting up content change notifications using a web part

In this example, you will learn how to add the **Content subscription** web part to your site and set it up.

> ⚠ In order for you to see the full functionality, it is necessary to have a SMTP server configured correctly.

1. Select the page on which you want to display the Content subscription web part.
2. Switch to the **Design** tab.
3. Place the **Content subscription** web part.
4. Set the **Web part properties**.

5. **Save & Close**.

Verifying the content subscription functionality

Let's switch to the site visitor's perspective now:

1. Open **Live site** on the page you placed the web part on.

- As notifications are available only for registered users, the web part should not be visible if you try signing out.
2. Type in your e-mail address into the **E-mail** field and click **Subscribe**.
3. Verify your subscription:
    a. Open the **My profile** application.
    b. Switch to the **Notifications** tab. You should see the notification subscription there.

Verifying the notification functionality

Now you can verify that the whole setup works and sends notifications as it should:

1. Perform the event that you configured in the web part.
2. You should receive a new notification e-mail about the event.

Managing user notifications

- Site administrators can manage subscriptions of particular users in the **Users** application. **Edit** a particular user and switch to the **Notifications** tab.
- Site visitors registered on the site can manage their subscriptions using the **My account** web part, on the **Notifications** tab.
- System users can can manage their own subscriptions in **My profile -> Notifications**.
