The **Store overview** application provides a widget dashboard that you can personalize to contain frequently used sources of information and tools. The dashboard is intended as an overview of the system's E-commerce Solution features.

Kentico offers many different widgets, that you can configure and place on the dashboard. For example, you can use widgets to view various e-commerce reports (e.g., monthly sales, sales by order status, etc.), to display a list of products, orders, etc. that match a specified filter, or to check whether all required e-commerce settings are configured correctly.

To learn how to work with widgets on dashboards, see Working with widget dashboards and its child pages.

E-commerce widget types

Kentico E-commerce Solution offers the following pre-defined widgets. You can change each widget by clicking **Configure widget** (⚙).

Orders

The widget shows information regarding orders, for example, unpaid orders, successful orders in the last week, or not yet finished orders older than two weeks.

Remember that:

- The **Total price in main currency from** field and the **Total price in main currency to** field must be positive numbers. Decimals are allowed.
- **Older than (days)** has priority if you fill both, this field and **Created during last (days)**. **Created during last (days)** will then have **no** effect.
- If a user doesn't have permission to do an action, you selected in **Actions**, the button of the action is hidden for the user.

Display unpaid orders older than 5 days

1. Click **Add new widget** to display the **Select widget** dialog.
2. In the left menu of the dialog, click **E-commerce**.
3. Select **Orders**.
4. Click **Select** to add the widget and to open the **Widget properties (Orders)** dialog.
5. In the **Billing** category, select *Not paid* in the **Payment status** field.
6. In the **How old orders** field, the default setting is to show orders only a year old. Enter *5* to the **Older than (days)** field.
7. Click **OK**.

The system saves and displays the widget. To change the name of the widget, click **Configure widget** (⚙) and change the **Widget title** field.

Products

The widget shows information regarding products, for example, products which have to be reordered, or products in sale.

Display products which have to be reordered

1. Click **Add new widget** to display the **Select widget** dialog.
2. In the left menu of the dialog, click **E-commerce**.
3. Select **Products**.
4. Click **Select** to add the widget and to open the **Widget properties (Products)** dialog.
5. In the **Inventory** category, select **Needs to be reordered**.
6. Click **OK**.

The system saves and displays the widget. To change the name of the widget, click **Configure widget** (⚙) and change the **Widget title** field.

Report widgets

Report widgets show basic information about the on-line store:

- **Daily sales** – displays sales in a day.
- **Monthly sales** – displays sales in a month
- **Number of orders by status** – displays order count by order status.
- **Sales by order status** – displays sums of the prices of existing orders by order status.

To display charts with advanced options, use the **Analytics chart viewer** widget in the **Web analytics** category. If you use the **Analytics chart viewer** widget, choose *(more items...)* in the **Chart** field to find E-commerce charts.
