Editable region controls create sections of pages where editors can fill in content. The controls provide editing functionality when the page is viewed in the Kentico administration interface on the **Page** tab of the **Pages** application, or in on-site editing mode. After a user enters content, the controls display it on the live site. The controls are only compatible with Kentico ASPX page templates.

> ⚠ **Note**: To add editable regions on Portal engine pages, use the **Editable text** and **Editable image** web parts.
